

What are the career opportunities?

Our graduates will have the theoretical knowledge and critical thinking skills to contribute to local, regional and global water management practice. They will have a realistic understanding of how to approach the problems regarding equal access to water and its sustainable consumption; gain competence in providing solutions to water issues and conflicts. Moreover, they will get familiar with water governance, institutional framework and water policies of different countries. They will have the chance to find jobs in governmental institutions, companies, universities and non-governmental organizations.

MASTER OF SCIENCE IN WATER POLICY AND SECURITY

ANKARA UNIVERSITY
GRADUATE SCHOOL of
SOCIAL SCIENCES

with the support of;

ENSTITÜSU
Ankara University Water Management Institute

WELCOME...

“Water is an essential but limited resource on earth. The pressures on water resources, i.e., population, climate change and industrialization make it more complex to solve water related issues. Solutions to these problems need critical thinking and interdisciplinary approach in research and development. Sustainable development goals for society, the economy and environment can only be achieved by strong cooperation among researchers, managers and policy makers.

Ankara University Water Management Institute (ENSTITUSU) was established in 2010 in order to develop new perspectives regarding water- related problems in Turkey and around the world. ENSTITÜSU has played a key role in establishment of the interdisciplinary Master Degree Program in “Water Policy and Security”. The students will gain expertise on sustainable water management, water policy and security issues. I invite you all to apply for our program! “

Assoc. Prof. Dr. Gökşen ÇAPAR
Head of Water Policy and Security Department
Director of Water Management Institute

Courses

The program requires that a minimum of 21 credits (120 ECTS), consisting of 2 compulsory and 5 elective courses, 1 seminar and thesis study, will be completed.

COMPUSORY	International Water Law
	Research methods
	Water Policies and Security
	Water Science
ELECTIVE	Adaptation to Climate Change
	Agricultural Water Management
	Coastal Zone Management
	Decision Support Tools for Policy Analysis
	Ecological Quality Classification in Water Bodies
	EU Water Framework Directive and Implementation in Turkey
	Food Safety
	Geopolitics of Turkey
	Industrial Water Management
